

How to install this pickupgenerator.com plugin

Step 1: Double click on the .pkg file in the Green backlit area on the start up screen of this .dmg file.

Step 2: Follow the steps within the .dmg files's installer (see * **NOTE** below on the "Installation Type" clarification).

Step 3: Once the installation is complete remember to Eject the Mounted Drive (has the same image as our logo below) from your Desktop.

Install Completed.

For any further assistance with how to use our plugins please visit:
www.pickupgenerator.com

* **NOTE:** When you reach the "Installation Type" section, please resist the urge to click on "Change Install Location...".

Reason being this will do 2 things.

1: By default only the User installing will be able to access this plug in. "Install For All Users Of This Computer" becomes the default.

2: All plugins for Final Cut Pro require a very specific file path to be accessible.

Changing the location will only prevent usage.

Should you click on "Change Install Location..." by accident, simply cancel the installation and start from Step 1
